Orbit AM — Complete Pitch & Packaging Pack

Product: Orbit AM — Hospital Asset & Maintenance Management
Company suite: Orbit AM + Orbit QM
Market: Egypt healthcare FM (year 1)
Audiences: Mid–large FM / maintenance companies + partners
Document type: Detailed sales & partner pack (bootstrap — no fundraising ask)
Version: 2026-07-14
Currency: EGP annual, VAT excluded

Table of contents

1. Executive summary
2. Product overview & CMMS definition
3. Feature matrix — implemented vs TBD
4. Packaging & pricing (EGP 420K–3.5M)
5. Hybrid phase pricing rules
6. Cloud TCO — AWS, Azure, Cloudflare
7. Hidden costs & full TCO (internal)
8. Partner cost split (detailed)
9. Team plan — founder + 2 interns
10. Go-to-market & partners
11. Orbit QM + Miraco
12. 16-slide deck outline
13. Pilot offer & next steps

---

1. Executive summary

Orbit AM is a **multi-tenant CMMS SaaS** for maintenance companies that serve **hospitals** in Egypt. It covers assets, preventive calendars, work orders, structured reports, and invoicing — with Arabic-first RTL UX.

Item	Decision
Brand	**Orbit AM**
Price band (all tiers)	**EGP 420,000 → 3,500,000** / year
Tiers	Clinical · Regional · Network · Enterprise
Business model	Hybrid annual subscription (asset-band primary + user caps); setup included
Cloud	**Not locked** — AWS / Azure / Cloudflare hybrid selection per deal
Phase pricing	Hybrid: core + Mobile included; Reporting by tier; **AI** and **Integrations** standalone
Traction	Pre-revenue AM; **Orbit QM live at Miraco**
Team burn model	Founder (~EGP 80K) + 2 student interns

---

2. Product overview & CMMS definition

What is CMMS?

CMMS = **Computerized Maintenance Management System** — software to register assets, schedule preventive maintenance (PM), run work orders, keep history/compliance records, and (in Orbit AM) generate invoices from completed work.

Orbit AM is **hospital-ready CMMS + billing**, not a claim of full IBM Maximo parity on day one.

Actors

```
Orbit platform  →  Maintenance / FM company  →  Hospital clients (sites)
  (you)              technicians & admins          biomed / facilities
```

Value proposition

- One system for FM company and every hospital it serves
- Arabic default + English
- Annual price includes onboarding (no surprise implementation invoice)
- Scales from **1 hospital / 500 assets** to **85 hospitals / 20,000 assets**

---

3. Feature matrix — implemented vs TBD

3.1 Core platform (sellable foundation)

Module	Status	Hospital relevance
Multi-tenant SaaS + RBAC	Done	FM vs hospital role split
Companies, sites, locations	Done	Multi-hospital per tenant
Assets + CSV import + lifecycle	Done	Biomed + facilities equipment
Maintenance calendar (M/Q/Y)	Done	PM planning
Work orders (full lifecycle)	Done	Corrective + preventive
Template reports + approval	Done	Compliance documentation
Invoices + branded PDF	Done	FM → hospital billing
Labor / time entries	Done	Engineer hours
WO requests (hospital → FM)	Done	Request channel
Licensing & feature gates	Done	Package enforcement
Arabic + English RTL	Done	Egypt differentiator
Demo pitch seed / reset	Done	Sales demos
Notifications	Partial	Needs production SMTP
Automated PM job runner	Partial / TBD	Needed before large contracts
AI maintenance	Stub only	Sold as **standalone** later
Mobile app	TBD	**Included in packages** when shipped
Advanced reporting / KPIs	TBD	Network+ included; lower tiers add-on
Systems integration	TBD	**Standalone** paid

3.2 Must close before first hospital contract

Gap	Effort band
Invoice / golden-path E2E green	2–4 weeks
Wave 5 UAT verification	2–3 weeks
Automated PM scheduling jobs	4–6 weeks
Production object storage	2–3 weeks
Hospital report templates	2–4 weeks

Realistic core readiness: ~8–12 weeks with founder + 2 interns (CMMS-core scope).

3.3 Maximo-inspired roadmap (honest phasing)

Phase	Capabilities	Pricing treatment
Pre-launch hardening	QA, PM jobs, storage, hospital templates	Included in tiers
Phase 2 — Reporting	KPI dashboards, cost-per-asset, compliance exports	**Included Network+**; add-on Clinical/Regional
Phase 3 — Mobile	Technician field app	**Included in all packages** when launched
Phase 3 — Intelligence	AI recommendations, forecasting	**Standalone — AI Maintenance**
Phase 4 — Enterprise connect	HIS/ERP/SSO, webhooks	**Standalone — Systems Integration**
Phase 4 — Parts	Inventory UI	Future add-on / later decision

---

4. Packaging & pricing (EGP 420K–3.5M)

4.1 Asset scale reference

Scenario	Hospitals	Assets	Users
Pilot	1	300–500	10–20
Growth	5–15	2,000–5,000	30–60
Network	~40	~10,000	~100
Enterprise	up to 85	up to 20,000	80–150+

4.2 Four tiers (annual)

Tier	Assets	Users	Hospitals	Annual EGP	~USD @ 50
Orbit Clinical	500	20	1	**420,000**	~$8,400
Orbit Regional	5,000	60	15	**1,050,000**	~$21,000
Orbit Network	10,000	100	40	**2,800,000**	~$56,000
Orbit Enterprise	20,000	150	85	**3,500,000**	~$70,000

Band check: Floor **420K** · Ceiling **3.5M** · Network sits **close to Enterprise** (confidence / anchoring).

4.3 Effective asset economics (illustrative)

Tier	EGP / asset / month (at cap)
Clinical (500)	70
Regional (5,000)	17.5
Network (10,000)	23.3
Enterprise (20,000)	14.6

4.4 Included in every tier

- Core CMMS modules (assets, WO, calendars, reports, invoices, labor, requests)
- Arabic + English RTL
- Onboarding + CSV import assistance + **5 days remote training**
- Business-hours support (Cairo TZ)
- Quarterly product updates
- **Mobile app (when launched)** — not sold separately

4.5 Pilot offer (6-month goal)

Clinical @ 50% year-1 = **EGP 210,000** for 12 months (1–2 reference logos + UAT feedback).

4.6 Suggested overages (order form, not public hero prices)

Overage	Guide
+1,000 assets	+EGP 90,000 / year
+10 users	+EGP 45,000 / year
Dedicated DB	Custom (+40% infra surcharge on that tenant)
On-site training travel	EGP 15–30K per trip (optional, billable)

---

5. Hybrid phase pricing rules

Rule summary

Item	Treatment
Core CMMS	Included in **all** tiers forever
Mobile technician app	**Included** in all packages when shipped (**not** a paid add-on)
Advanced Reporting & KPIs	**Included** from **Network** and Enterprise; **paid add-on** for Clinical & Regional
AI Maintenance	**Standalone product** — always separately priced
Systems Integration	**Standalone product** — always separately priced
Forecasting	Packaged inside **AI Maintenance** as capability matures

Advanced Reporting add-on (Clinical / Regional)

Guide price	Note
EGP 280,000 / year	Aligns under Network uplift without breaking 3.5M ceiling story

Standalone — AI Maintenance (quote)

Scope	Pricing posture
AI PM suggestions, work-planning assistance, forecasting roadmapped	**Custom annual** — typically mid–high six figures EGP; never "free in Enterprise"

Standalone — Systems Integration (quote)

Scope	Pricing posture
HIS / ERP connectors, SSO, webhooks	**Custom** — per connector or SOW; year-1 optional

Sales language (use on deck)

> "Your package includes the full CMMS and, when ready, the mobile app. Advanced reporting is included from Network upward. AI and system integrations are optional modules you can add when you need them."

---

6. Cloud TCO — AWS, Azure, Cloudflare

Decision state: Cloud is **selection-based** — not pre-decided. This section is for partner / technical honesty.

6.1 Fit for Orbit AM (FastAPI + PostgreSQL + React)

Provider	Verdict
AWS	Excellent primary: RDS Postgres, ALB, S3, ECS/EC2
Azure	Excellent primary: Flexible Server, App Service/AKS, Blob; useful if buyer is Microsoft-centric
Cloudflare	Best as **edge layer** (CDN, WAF, R2 zero-egress photos). **Not** a full Postgres replacement (D1 = SQLite). Pair with Neon/RDS/Supabase via Hyperdrive if using Workers

6.2 How the bill is triggered

Line item	Trigger	Scaling note
API compute	Instance / vCPU **hours while running**	Scales with concurrent users & jobs
Managed Postgres	**Provisioned** hours + storage GiB	Multi-AZ / zone-redundant ≈ **~2× compute**
Extra / dedicated DB	**New instance = new fixed monthly floor**	Only for Network/Enterprise quotes
Load balancer	ALB / Azure LB **hourly** + capacity units / processed bytes	Turn on when HA / multi-instance needed
Object storage	GiB stored + requests + **egress**	Hospital photo uploads can dominate
Backups	Beyond free allotment	Grows with DB
Cloudflare	Workers requests, R2 storage (often $0 egress), WAF plan	Cheap edge; **does not cancel** DB bill

6.3 Indicative monthly infra (shared multi-tenant, USD → ~EGP×50)

Stage	Layout	USD/mo	~EGP/mo
Pilot (Clinical)	1 API + small Single-AZ Postgres + storage + CDN	80–200	4–10K
Regional scale	2 API + Multi-AZ Postgres + ALB + storage	250–600	12–30K
Network / heavy shared	Autoscale API + HA Postgres (+ optional read replica)	500–1,200	25–60K
Dedicated Enterprise DB add-on	+ Multi-AZ Postgres per whale	+200–475	+10–24K

6.4 Multi-tenant economics (important)

Pattern	Cost behavior	Orbit year-1 default
Shared DB + `tenant_id`	Cost grows with **load/size**, not tenant count	**Yes — default**
DB-per-tenant	~$40–150+/tenant/mo baseline	Only with Enterprise ACV + compliance need

6.5 Recommended selection guide (not a lock-in)

1. Start **shared multi-tenant** on **AWS or Azure**
2. Put **Cloudflare** in front for CDN/WAF; use **R2** if photo egress hurts
3. Offer **dedicated DB** only on Network/Enterprise custom quotes

---

7. Hidden costs & full TCO (internal)

7.1 Monthly burn (pre-revenue / few customers)

Line item	Low	Base	High
Founder	70,000	**80,000**	90,000
2 student interns	8,000	**9,000**	10,000
Tools / stipend misc	2,000	3,000	5,000
Cloud (dev+demo+pilot)	3,000	**6,000**	12,000
SaaS tools	4,000	**8,000**	15,000
Sales & marketing	5,000	**12,000**	25,000
Legal & accounting (amortized)	2,000	**4,000**	8,000
Contingency	5,000	**10,000**	15,000
Total / month	**99,000**	**~132,000**	**180,000**

6-month runway (base): ~EGP 790,000

7.2 COGS after you sell (what eats margin)

Tenant	Infra/mo (EGP)	Support load
500 assets	3–8K	Low
5,000 assets	15–35K	Medium
10,000 assets	30–70K	High
20,000 assets	50–120K	Highest

Hidden COGS triggers: WO photo storage, custom integrations (your time), on-site travel, payment fees 2.5–3%, FX 1–3%.

7.3 Customer-side hidden costs (sales honesty — FAQ, not partner slide)

Their cost	Typical
Biomed project owner	20–40% FTE × 3 months
Asset data cleanup before import	Largest delay risk
Technician adoption	2–6 months
Enterprise IT / SSO reviews	Network/Enterprise deals

---

8. Partner cost split (detailed)

Audience: Partners / implementers / referral agents — **not** end-hospital buyers.
Purpose: Show where annual subscription money goes so partners understand margin and commission integrity.

8.1 Year-1 ACV split (indicative)

Bucket	Share of ACV	What partners should know
Cloud & platform ops	**12–18%**	Hosting, DB, LB when needed, backups, monitoring, CDN/WAF
Onboarding & delivery	**10–15%**	Included migration/training — partners who implement may earn from this + fee
Support & success	**8–12%**	Business-hours support, triage
Product & R&D	**20–25%**	CMMS roadmap, Arabic UX, mobile when shipped
Sales & partner commission	**10–15%**	Referral commission lives here on partner-sourced deals
Gross margin / runway	**25–35%**	Company sustainability; cushions Enterprise COGS

8.2 Worked examples

Clinical ACV = EGP 420,000

Bucket @ mid	EGP
Cloud 15%	63,000
Onboarding 12%	50,400
Support 10%	42,000
R&D 22%	92,400
Sales/partner 12%	50,400
Margin 29%	121,800

Referral partner at 12% year-1 ACV → EGP 50,400 on a full Clinical deal.

Regional ACV = EGP 1,050,000 → referral 12% = **EGP 126,000**
Network ACV = EGP 2,800,000 → referral 12% = **EGP 336,000**
Enterprise ACV = EGP 3,500,000 → referral 12% = **EGP 420,000**

8.3 Partner programs

Stage	Model	Economics
0–3 customers	Direct + warm network	—
3–10	**Referral**	**10–15% of year-1 ACV**
10+	**Certified implementer**	**20–25%** + defined implementation fee

Year-1 ACV = first-year subscription only (not recurring forever unless contracted).

8.4 Why Network is priced close to Enterprise

Anchors confidence: Network at **2.8M** is a serious hospital-network product; Enterprise at **3.5M** is the national/cap tier — not a 4× jump from Regional that looks arbitrary.

---

9. Team plan — founder + 2 interns

Role	Focus	Mentoring
Founder	Architecture, hospital domain, sales demos, reviews	10+ hrs/week with interns
Intern A — QA	Playwright E2E, hospital golden path, Wave regression	—
Intern B — Frontend	Hospital templates, dashboards, Arabic copy	—

Stipend: EGP 4,000–5,000 each / month (included in burn §7.1).

10. Go-to-market & partners

Channel	Action
Direct	FM companies already in hospitals
Demo-first	Pitch Docker demo + 30-min golden path
Mix	LinkedIn, referrals, associations
Partners	Referral 10–15% year-1 ACV
Timeline	First paying customer in **6 months** (Clinical pilot)

Support year 1: Founder-led (cap concurrent customers until partner support or hire).

---

11. Orbit QM + Miraco

Orbit QM (suite sibling)

Orbit QM is a **Quality Management Dashboard** for manufacturing quality operations.

Capabilities (from product workspace):

Area	Modules
Overview	Dashboard, Traceability
Inspections	**IQC**, **IPQC**, **FQC**
Quality	**NCR**, **CAPA**, Suppliers, Calibration, Audits, Complaints
Manager tools	Part specs, Process flow, **SPC control charts**
System	Master data, Reports, Notifications, Users / RBAC

Roles span Data Entry → Supervisor → Engineer → Quality Manager / Admin. Printable QMS documents with company letterhead.

Live customer — Miraco

Field	Detail
Customer	**Miraco**
Legal / trade context	Miraco Company for Air Conditioning & Refrigeration
Geography	**Egypt**
Context	Manufacturer of **Carrier & Midea** products
Product used	**Orbit QM** — quality management system
Pricing	**Not published in this pack**

Cross-sell narrative

Orbit AM (hospital / facility maintenance) and Orbit QM (manufacturing quality) share SaaS DNA: role-based ops, Arabic-ready UX, printable controlled documents. Different domains — complementary credibility for the Orbit brand.

---

12. 16-slide deck outline

Use `docs/pitch/ORBIT_AM_SLIDE_PROMPT.md` for generator-ready prompts. Summary:

#	Slide	Notes
1	Title	Orbit AM
2	Problem	Excel / WhatsApp / expensive CMMS
3	Solution	Multi-tenant hospital CMMS
4	How it works	3-tier actors
5	Product deep-dive	Core modules
6	Live vs roadmap	Honest
7	Package × features matrix	Clinical→Enterprise
8	Pricing 420K–3.5M	4 tiers
9	Standalone AI + Integrations	Mobile included
10	Why Egypt healthcare	Scale story
11	GTM	Mix + referral %
12	**Partner cost split**	Detailed ACV pie
13	Cloud options	AWS/Azure/CF selection
14	Orbit suite	AM + QM
15	Customers	**Miraco** (QM); AM pilots
16	CTA	90-day Clinical pilot

---

13. Pilot offer & next steps

90-day hospital pilot

1. One hospital · ~300–500 assets · Clinical
2. Asset import + PM schedules included
3. Train ≤20 users included
4. KPIs: PM compliance, WO cycle time, invoice accuracy

Pilot price option: EGP **210,000** year-1 (50% Clinical) for reference customers.

Immediate actions

1. Freeze v1 sales scope = core CMMS (+ mobile when ready, included)
2. Keep AI & Integrations off the critical path for first logo
3. Select cloud with first serious Network/Enterprise prospect (credits / IT preference)
4. Name first Clinical pilot prospect
5. Generate slides from `ORBIT_AM_SLIDE_PROMPT.md`

Appendix A — Price card (print)

Package	Annual EGP	Assets	Users	Hospitals
Clinical	420,000	500	20	1
Regional	1,050,000	5,000	60	15
Network	2,800,000	10,000	100	40
Enterprise	3,500,000	20,000	150	85

VAT excluded · Setup included · Mobile included when launched · AI & Integrations standalone

---

Appendix B — Glossary

Term	Meaning
CMMS	Computerized Maintenance Management System
ACV	Annual Contract Value (one year of subscription)
Year-1 ACV	First contract year only (partner commission basis)
COGS	Cost to serve a customer (infra + support load)
TCO	Total cost of ownership (all parties)
PM	Preventive maintenance
HIS / ERP	Hospital information / enterprise resource systems

End of pack. Companion file: `ORBIT_AM_SLIDE_PROMPT.md`
